

IDAutomation Narrow Font Information

The fonts provided within the "Narrow Fonts" folder are narrow version fonts that use a 2:1 narrow to wide ratio instead of the industry standard 3:1 ratio to save space. If the 3:1 ratio is not required for your implementation and you are using modern scanner equipment, IDAutomation recommends using the narrow version fonts.

Narrow fonts are not provided in Extended or Symbol varieties. To encode a space with the narrow fonts, substitute the "_" (underscore) character for the space character. For example, *TEST_123* will scan as:

TEST 123
