

IDAutomation Dot Matrix Printer Font Information

The fonts provided within the "Dot Matrix Printer Fonts" folder were designed and tested for 240 DPI dot matrix printers. These fonts include extra spacing between the bars and may also work on other dot matrix printers. When using these fonts on 240 dpi dot matrix printers, they should be printed at 9 or 18 points. Other point sizes will have to be tried when printing on other printers. It is recommended to print 6 characters, for example, *ABCDEF* at all point sizes between 8 and 24 points to find the size that scans well.
