INVENTORY MANAGEMENT SOLUTIONS

Inventory Control Software Designed for Any Operation

Why Do Customers Choose **InventoryCloud**?

InventoryCloud allows users to easily transition from error-prone manual process and antiquated systems to a modern, feature-rich inventory management platform.

With **InventoryCloud**, users can:

- 
-  **Streamline Inventory Audits and Cycle Counts**
Ensure inventory numbers are accurate and up to date so organizations never get caught without the inventory to fulfill an order.
 -  **Consolidate Inventory Across Multiple Sites**
With InventoryCloud's web-based solution, organizations can manage inventory at as many sites as needed over multiple networks. Track inventory and run reports on one or multiple sites.
 -  **Modernize Pick Order Processes**
Prepare pick orders for inventory items (or even consolidate inventory and non-inventory items or services on a single pick order) and provide to inventory pickers to ensure the right product, right order and right customer every time.
 -  **Simplify Order Management**
One unified platform allows organizations to manage orders from all departments and channels, with instant status updates on both purchase and pick/sales orders.
 -  **Trigger Notifications for Critical Intelligence**
InventoryCloud allows users to receive pop-up alerts or e-mail notifications for events such as low inventory levels, expiring items, late orders, checked-out items past due and more. Set custom triggers and avoid unnecessary stockouts.
 -  **Generate Reports for Better Business Intelligence**
Real-time inventory reports allow organizations to compile and analyze essential data, like transactions by site or warehouse, itemized inventory levels by SKU or individual customer purchase order history. Along with InventoryCloud's many standard reports, an organization can build custom reports to receive relevant, timely information about inventory.
 -  **Customize for Business Terminology**
Customizing and defining field terms to fit the language of an organization is quick and easy. Businesses can reduce training time and employees no longer have to interpret field names.
 -  **Manage Security Roles**
Create custom user roles and assign users to those roles so employees have access to only the information and features they need.
 -  **Set Tiers and Automate Price Changes**
Setting up and managing pricing tiers is just a click away and allows organizations to ditch manual calculation while automating and tracking all pricing changes.

The Challenge

To manage The Horned Frog Fueling Station, the department must track and maintain inventory of foods stocked in three pantry locations. The inventory requires not only stock counts, but also expiration dates. "We were just doing manual inventory checks by going into our storage areas and making notes about what items seemed to be running low," said Brittany Little, TCU Sports Nutrition Graduate Assistant. "With over 40 vendors and more than 300 food products to track, we needed to find an inventory management system to streamline our foodservice operation."

The Solution

TCU Sports Nutrition implemented InventoryCloud from Wasp Barcode Technologies to better track the food in their pantry. "We have peace of mind now," said Little. "InventoryCloud has been a stress reliever for us."

Easy to Implement

"It was a priority to find an inventory management system that the departments' volunteers, many of whom are undergraduate students, could easily learn using the department iPads," said Little. "We really liked that WASP had a user-friendly app that could be used on our iPads." The department has a WASP scanner mounted next to their iPads which they use to scan products into the InventoryCloud app. Their fueling station managers also use the Wasp DR3 mobile device to perform various transactions on the go.

Easy to Onboard

The TCU team began learning InventoryCloud using Wasp's online training and reached out to customer support when they needed additional assistance. "Wasp Customer Service really stood out. We were able to easily request help to customize reports," said Little.

Easy to Scale

Using InventoryCloud, the department can now accurately track and manage food stocks anywhere on campus and provide inventory visibility to all program stakeholders.

The Result

InventoryCloud has helped TCU Sports Nutrition solve a number of problems. Aside from tracking food and managing expiration dates, the department has also been able to save money by reducing food waste "We have been able to streamline and standardize our ordering processes; as a result, we are now making optimal use of our limited storage space and can avoid running out of important products!"

"InventoryCloud has incredible capabilities," said Little. "I have already recommended it to another Big 12 school that came to our facility for a tour!"

“With over 40 vendors and more than 300 food products to track, we needed to find an inventory management system to streamline our foodservice operation. We have peace of mind now; InventoryCloud has been a stress reliever for us.”
